SUMMARY

Software Engineering student and Flutter Developer who builds apps end to end, from Riverpod and Clean Architecture to real backends on Firebase, Supabase, or FastAPI. Completed a remote Flutter internship at FlutterCraft.app in August 2026; recent work includes BioGuard, an IoT cold-chain compliance system, and two full-stack LLM-powered Flutter apps. Now extending into GenAI engineering (LLMs, prompt engineering, RAG), grounded in Clean Architecture, SOLID, GoF Design Patterns, and OOP.

EXPERIENCE

Flutter Developer Intern — FlutterCraft.app (Remote)

Jul 2026 – Aug 2026

- Completed an eight-week remote Flutter development internship (1 July – 28 August 2026)

Freelance Flutter Developer — Fiverr

Remote / Contract | Ongoing

- Delivered freelance Flutter app development, Firebase integration, and REST API integration services for clients via Fiverr

EDUCATION

BS Software Engineering — FAST-NUCES, Faisalabad

2024 – 2028 (expected)

SKILLS

Mobile: Flutter, Dart, Riverpod, Provider, Hive, Drift (SQLite), Platform Channels, iOS Live Activities, Android Foreground Services, flutter_local_notifications, Material Design, Animations

Architecture & Design: Clean Architecture, Layered Architecture, MVC, MVP, Repository Pattern, Feature-First Architecture, SOLID, GoF Design Patterns, OOP, UML

Backend & Cloud: Firebase Auth, Firestore, Firebase Realtime Database, Firestore Security Rules, REST APIs, Cloudflare Workers, Google Cloud Run, PostgreSQL, FastAPI

AI: Antigravity, Cursor, Claude Code, Google Stitch, OpenRouter, Postman, LLMs, Prompt Engineering

Languages: SQL, Dart, C++, Java, Python

Tools: Git, GitHub, VS Code, Android Studio, Docker

PROJECTS

BioGuard — IoT Cold-Chain Compliance System | *FastAPI, Flutter, Riverpod, MQTT, Web Socket, Firebase*

- Built an IoT system that monitors temperature-sensitive medical storage (vaccines, insulin, biologics); a Python sensor simulator stands in for physical hardware, publishing temperature and lock readings over MQTT (QoS 1) to a Mosquitto broker
- Designed a FastAPI backend that checks every reading against per-device thresholds and opens, escalates (warning to critical beyond 5 °C), or resolves alerts, pushed live over WebSocket and Firebase Cloud Messaging
- Built the Flutter app with JWT auth (login/register/logout), a live multi-device dashboard, history screen with trend charts, persistent alert history, and PDF compliance reports

AcadAI Buddy — AI Study Companion | *Flutter, Firebase, Riverpod, Clean Architecture*

- Built a full-stack AI study app for Pakistani university students with real-time AI chat, auto-generated MCQ quizzes with instant scoring, and note summarization from text or images
- Four-layer Clean Architecture with Riverpod 2.x and dartx Either error handling; Firebase Auth, Firestore chat history, and OpenRouter API; supports 40+ subjects incl. all FAST-NUCES core courses

CreateResume AI — AI-Powered Resume Builder | *Flutter, Supabase, Riverpod, OpenRouter API*

- Built an AI resume builder that turns plain-language input into complete, ATS-optimized resumes, exported as PDFs across 5 templates via a custom template engine
- Generated resumes in a Supabase Edge Function so the OpenRouter API key never ships in the app; job-targeted optimization, credit-based free/premium plans, Clean Architecture with Riverpod and go_router

Console Chess Game | *C++, OOP*

- Polymorphic Piece hierarchy with factory creation; layered legal-move validation (geometry, path blocking, king safety) drives check, checkmate, and stalemate detection

Console-Based Social Media Platform | *C++ / DSA*

- Built without STL containers: hash table (users), graph with BFS/DFS (friends), linked lists (feeds, stories), queue (notifications), stack (messages), AVL tree (top-K analytics); team project with Muhammad Hassan

UniDisc — University Management System | *C++, Java, OOP*

- Engineered a discrete-math framework for course scheduling, prerequisite validation, faculty assignment, and enrollment using predicate logic, set/relation analysis, induction, and DP with memoization for conflict detection

Flutter Weather App | *Flutter, Dart, REST API* · Flutter Multi-Currency Converter | *Flutter, Dart*

- Live weather with multi-day forecasts and location lookup; PKR to 20+ currencies via live exchange-rate APIs

CO-CURRICULAR ACTIVITIES

- Participated in GDG “Build with AI” hackathon: built FounderAI, a Node.js/Express AI startup assistant on Render
